DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-2, drawn to a configuration file with communication identification information that is a property of the file but accessible without opening the file, are classified in class 709, subclass 221.
 - II. Claims 3-42, drawn to a program to access a configuration file and which are both accessed by a physical address, are classified in class 709, subclass 227.
2. The inventions are distinct, each from the other because:

The claims in Group I involve steps to access a configuration file communication information, while the claims in Group II specifically involve accessing a program and a configuration file, which is classified in a different class from Group I.

3. Inventions I, and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as to control how communication information is accessed. In the instant case, invention II has separate utility such as to simply access a configuration program and file. See MPEP § 806.05(d).

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and the searches required for Group I is not required for Groups II, restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
